

2021 Product hunt release

First off, really excited to have [@kevin](#) hunt us, thanks so much! Hey Product Hunt 🙌 I'm Patrick, the Co-founder of Iteratively. We're on a mission to help product, growth and data teams capture high-quality data they can trust. My Co-founder [@ondrej421](#) and I spent six months doing extensive customer research, interviewing over 400 product managers, data teams and engineers. We found the number one pain point was bad data. Having experienced this pain ourselves at Atlassian and Microsoft, we finally heard enough and knew there must be a better way. ...enter Iteratively 🚀 At our core, we're a schema registry for your analytics. Our product consists of an intuitive web app for product managers and analysts to create and evolve their analytics tracking plan (schema) and developer tooling for engineers to quickly and easily instrument the tracking. Always in sync, teams can work cross functionally to ensure event tracking is implemented accurately and according to spec, so data consumers have high quality data to work with. And what's more, we integrate seamlessly with companies' existing data stack, SDLC and processes. A few product highlights: 📈 Build back confidence in your data We take a quality-first approach to analytics tracking with a schematized tracking plan, type-safe SDKs, unit testing and integrations with CI. With Iteratively you get high quality data that's ready to be consumed, no munging required. 🏆 Make data a team sport Iteratively is architected from the ground up to support collaboration. With an intuitive web app and best-in-class developer tooling we bring product managers, analysts and developers together to conquer and evolve their analytics tracking. 🔒 Never compromise data privacy We ensure you stay compliant by blocking PII data from leaking to your analytics providers and give you control through thorough review and approval workflows for optimal oversight and data governance. Having early customers meant we could iterate quickly, ship fast (early 😊) and get rapid feedback on what we were building. A special thanks to the teams at Box, Artifact Uprising, Beekeeper, Dribbble, Octopus and many more for bearing with us since the early days 🌟 ✨ We just launched a free tier of our product so you can sign up today and check out the product for yourself. As founders we still work with all our users so we look forward to meeting you! 🙏 Your feedback means the world to us so please comment and let us know what you think 🙏
