Iteratively raises \$5.4M to help companies build data pipelines they can trust

Frederic Lardinois 7:00 AM PST · February 4, 2021

As companies gather more data, ensuring that they can trust the quality of that data is becoming increasingly important. An analytics pipeline is only as good as the data it collects, after all, and messy data — or outright bugs — can easily lead to issues further down the line.

Seattle-based [Iteratively](#) wants to help businesses build data pipelines they can trust. The company today announced a \$5.4 million seed funding round led by Google's AI-centric Gradient Ventures fund. Fika Ventures and early Iteratively investor PSL Ventures also participated, with Gradient Ventures partner Zach Bratun-Glennon joining the company's board.
